

## LIQUIDBRICK ECO – ANTIQUE CROSSWALKS

---

Design details: Custom color: Antique Miami Red

**Product:** LIQUIDBRICK ECO W/ Duracolor colored glass

**Location:** City of Miami – Entire Downtown Area

**Specification:** Intersection designed to provide an inviting and aesthetically pleasing pathway for pedestrians and motorists as they enjoy the unique atmosphere of downtown Miami. LiquidBrick ECO was the chosen product due the requirement that the product used be of 100 % integral color thru aggregate, this was achieved with “DuraColor colored aggregate “comprised of a synthetic blend of colored & recycled glass. In addition due to the synthetic composition of the aggregate it is impervious to all surface contaminants such as, oil spots, fuel leaks. Because the color of the aggregate is integral and not just a color coat it will remain for the life of the surface with almost no loss of color impact.

City requested a product that would retain the same aesthetic appeal after many years in service. As an added benefit of the system the entire surface is easily maintained with a light pressure wash as needed. No other aggregate based system can offer this benefit of affordable lifetime color.

# LIQUIDBRICK ECO – ANTIQUE CROSSWALKS

---

## Project requirements:

- 3- year limited warranty
- Integral colored aggregate – lifetime color retention, a must for any decorative project
- High friction surface
- ADA compliant
- Exact ( pantone) color matching with many standard colors to choose from
- Maintain colorfastness for the design life of the surface
- Meet and exceed the stringent quality requirements of the design firm.

## LIQUIDBRICK ECO – ANTIQUE CROSSWALKS

---

Progressive Photo @ 1 Year clearly shows the benefit of having an integral colored surface as compared to a color coated aggregate as some of our competitors offer. Notice that the crosswalks show no color loss at all and our proprietary antiquing process actually eliminates the tracking of vehicle tires which is a common problem with color coated aggregate decorative Paving Systems. Also because our aggregate is 100% synthetic it does not absorb contaminants such as oil, fuel and grease common on the roadways which is in stark contrast to some of our competitors who only offer color coated aggregates which upon losing their color coat immediately begin to absorb oils and develop stains throughout the surface which cannot be washed away without also removing the color coating.
