

STREETBRICK – Driveway Finishes

Standard Package: 1- Color

Product: STREETBRICK

Location: City of Plantation

Specification: Complete construction of residential asphalt driveway to be finished with a decorative application that would provide an aged / antiqued look and feel. In order to meet this challenge “STREETBRICK” was used due to its very flexible natural surface texture process which allows the particular personality of the existing asphalt surface to mirror through the coating and thus gives an organic/ natural look and feel to the finished driveway. STREETBRICK makes it possible to duplicate the look of hand laid brick pavers without the headaches associated with pavers such as, weeds, water penetration to the sub base and/or oil stains. STREETBRICK was the perfect answer as can be seen in the pictures the system perfectly duplicates the three dimensional look of grout lines that are the most desired aspect of hand laid brick pavers.

Project requirements:

- Surface had to be completely non slip due to Equestrian activities
- Finished product must be able to transform a surface from brand new to aged/ antiqued.
- Multi-color application
- Integral colored coating
- Complete construction process “ from permits to final inspection”
- Maintain colorfastness for the design life of the surface
- Meet and exceed the stringent quality requirements of the residential home owner.
