

STREETBRICK- XL @ (5 YEARS)

Newly Installed African Tribal Crosswalks in the year 2009

Same crosswalk at 5 years and as can clearly be seen the original decorative intent of the project design is still completely intact. No other type product can match this for color durability, surface wear durability and skid resistance. Also consider that the surface has never once been pressure washed and yet the colors still pop. Also, like all decorative projects there are key factors in the original installation of any decorative project that should allow for many years of

STREETBRICK- XL @ (5 YEARS)

visual impact upon the traveling public, in this case we have # 1- pattern imprint, # 2- color fastness and # 3- intricate design layouts. As the pictures clearly demonstrate the finished project 5 years on is still performing in every key factor as was originally intended by the designer.

Product: STREETBRICK- XL

Location: Overtown – City of Miami

Specification: Multi-color and 20 different patterns. Pedestrian- crosswalk art transposed from artistic renderings onto to existing crosswalks (Artistic design by: CRA of Overtown).

Project requirements:

- Mechanically imprinted asphalt (3/8" depth) (not a veneer surface) this type system offers the only traffic rated decorative surface that is renewable by simply recoating as needed (7- 10) years on average at a nominal cost. The system is the only product that actually stamps the asphalt with the chosen pattern in a permanent manner that resembles as close as possible the 3 dimensional look of brick pavers.
- Ability to be installed on existing 3 year old asphalt
- ADA compliant
- Integral colored coating / Exact (pantone) color matching
- Maintain a high coefficient of friction for the design life of the surface (7- 10 years)
- Meet and exceed the stringent design requirements of almost any project.
- Color fastness and the ability to withstand the harsh UV effects of the south Florida climate.

Project goals:

Transform existing standard crosswalks into artistic representations of African Tribal History.

Enhance the neighborhood atmosphere by introducing a decorative streetscape design.

The very colorful designs were also meant to transform the entire area into a pedestrian friendly neighborhood where families and visitors can be made to feel safer when crossing streets thru the use of high impact visual art in the crosswalk areas. By catching the eye of the motorist as well as the pedestrian it is hoped that a safer environment can be created for all.

Results:

STREETBRICK- XL @ (5 YEARS)

To this day the City of Miami, Overtown CRA & the surrounding communities remain very impressed and satisfied with the performance of the streetscape design as installed by Atlantic Paving.

5 years of wear and the pattern imprint is fully intact, color scheme is clearly visible and most importantly the design intent of all these components is still fully visible. Results like these are what make for a successful decorative application.

5 years of proven wear
