

## STREETBRICK – Intersections

Design details: (Outer band: Pattern- Running Bond Color- Cranberry), (Middle band: Pattern- Herringbone Color- Nutmeg), (Center area: Pattern- Radial brick Color- Sunbaked Clay)

**Product:** STREETBRICK

**Location:** South Florida

**Specification:** ( Traffic Calming Device) 4" elevated intersection designed to provide a traffic calming effect by slowing the vehicular traffic thru the use of the visual impact created by elevating the body of the intersection as well as the decorative elements which thru the use of patterns and colors further enhances the desired impact of slowing the approaching traffic flow.

City requested a product that could as close as possible duplicate the look of hand laid brick pavers. STREETBRICK was the perfect answer as can be seen in the pictures the system perfectly duplicates the three dimensional look of grout lines that are the most desired aspect of hand laid bricks pavers. As an added benefit of the system the entire surface is easily maintained due to the fact that the imprint of the pattern is permanent and as the years pass and the coating begins to show wear the entire surface can be recoated for a nominal cost and be returned to like new condition again. No other system can offer this benefit of affordable lifetime color.

### Project requirements:

- 3- year limited warranty
- Non-slip surface
- ADA compliant
- Integral colored coating / Exact ( pantone) color matching
- Maintain colorfastness for the design life of the surface

## STREETBRICK – Intersections

---

- Meet and exceed the stringent quality requirements of the design firm.
